LowCodeStudio guide

Power Apps Modern UI How to use it

Thirty modern styles for Power Apps canvas apps, generated as copy-and-paste YAML. This guide shows the two ways to use them: with Claude, or with the ready-to-use page.

All 30 styles, shown on the same demo app.

github.com/vikramdevesh/powerapps-modern-ui · by Devesh Vikram

1. What you get

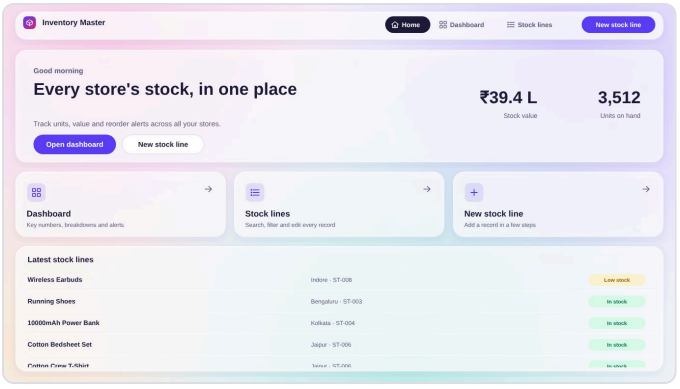

Each style comes with four screens, sized for a tablet canvas (1366 × 768):

- **Home**: a welcome hero, two headline numbers, quick-action tiles and the latest records.
- **Dashboard**: KPI cards, a breakdown chart, a top-N ranking and an alerts list.
- **List**: search, filter pills, a sortable table and status chips.
- **Form**: add, edit and delete records, with validation and a summary panel.

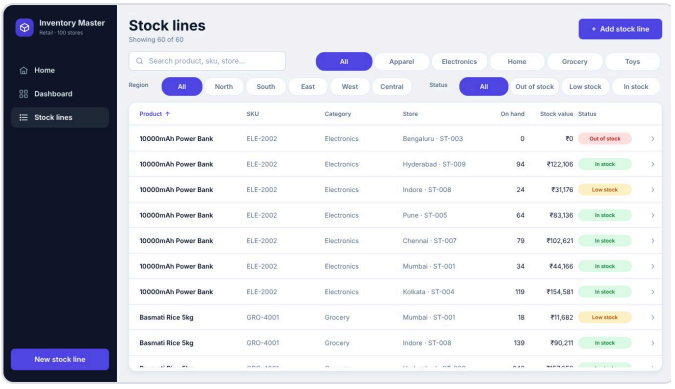

All the art is drawn with SVG inside the YAML, so you don't need images, connectors or premium licences. Data can work two ways:

Demo data
The sample rows live in the app's *Formulas*. Paste the YAML and it runs. Edits last until the app closes.

SharePoint list
Create a list from the included `sample-data.csv` and the screens read and write it directly, so changes are saved and shared.

Home screen, Aurora Glass

List screen, Slate & Indigo

Two ways to use it

A. With Claude (recommended)
Describe your own app. Claude shows samples in styles that fit, you pick one, and you get YAML built for your fields and wording.

B. Ready-to-use page (no Claude)
Open `docs/ready-to-use.html`, pick any of the 30 styles and copy the YAML for the demo inventory app.

2. Way A: Build your own app with Claude

One-time setup

- **Claude.ai or the desktop app:** on GitHub, choose **Code → Download ZIP**. In Claude, go to **Settings → Capabilities → Skills** and upload the ZIP.
- **Claude Code:** `git clone https://github.com/vikramdevesh/powerapps-modern-ui ~/.claude/skills/powerapps-modern-ui`
- **No install:** paste the GitHub link into a chat and say *"use this skill"*. This needs Claude to have web access in that chat.

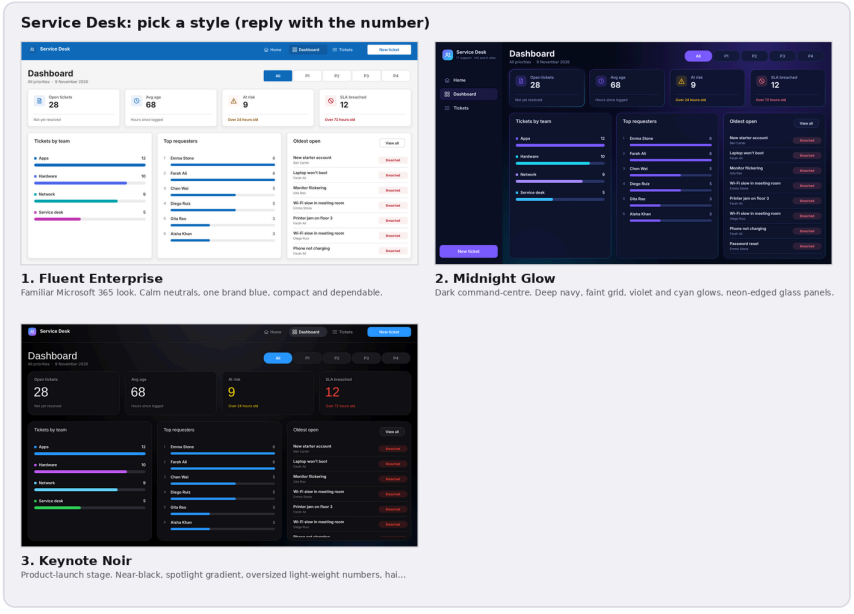

The conversation

1. **Ask for an app.**

   > **You:** Build me a Power App for our IT service desk tickets.

2. **Claude asks what you're building.** It wants to know what the app is for, who uses it and where, which screens you need, the main record and its fields, and your brand name or colour. Short answers are fine. Claude proposes fields if you're unsure.

3. **Claude shows samples of your app.** You get your app drawn in the 3–4 styles that suit it, numbered, with one line on why each fits.

Example: Claude's style samples for a Service Desk app.

4. **Pick one.**

   > **You:** 2

5. **Get the YAML.** Claude gives you a page with one block per file and a **Copy** button on each, plus the raw files and a sample CSV. Paste them as shown in section 4.

6. **Ask for changes in plain words.** For example: *"Make the accent green"*, *"Add a Supplier field"*, *"Drop the home screen"* or *"Connect it to my SharePoint list"*. Claude rebuilds the YAML and you paste it again.

3. Way B: Use the ready-to-use page (no Claude)

Open `docs/ready-to-use.html` from the repo in Chrome, Edge, Safari or Firefox. It works offline. It contains every style's YAML for the demo *Inventory Master* app in two versions (demo data and SharePoint list), plus the sample CSV.

Top of the page: the three steps, the data option switch and the CSV download.

1. **Pick a data option:** *Demo data* or *SharePoint list (from CSV)*. The instructions update to match.
2. **Click a style thumbnail.**
3. **Copy each block** in order with its **Copy** button, or download it as a file.

Your paste blocks

Printed-cardstock cards with dotted fold lines and soft shadows on a green self-healing cutting mat.

Best for: Retail and toy shops, maker / craft brands, kids' and education apps, playful internal tools.

Papercraft Models · SharePoint list

4 blocks to paste, in this order.

1. HomeScreen.pa.yaml Copy Download

Right-click a screen → Paste. This is the start screen.

```
Screens:
  HomeScreen:
    Properties:
      Fill: |-
        =ColorValue("#3f7d4f")
      OnVisible: |-
        =If(IsBlank(gSeg), Set(gSeg, "All"));
        If(IsBlank(gFilt), Set(gFilt, "All"));
```

2. DashboardScreen.pa.yaml Copy Download

Right-click a screen → Paste.

```
Screens:
  DashboardScreen:
    Properties:
      Fill: |-
        =ColorValue("#3f7d4f")
      OnVisible: |-
        =If(IsBlank(gSeg), Set(gSeg, "All"));
        If(IsBlank(gFilt), Set(gFilt, "All"));
```

3. ListScreen.pa.yaml Copy Download

Right-click a screen → Paste.

```
Screens:
  ListScreen:
    Properties:
      Fill: |-
        =ColorValue("#3f7d4f")
      OnVisible: |-
        =If(IsBlank(gSeg), Set(gSeg, "All"));
        If(IsBlank(gFilt), Set(gFilt, "All"));
```

4. FormScreen.pa.yaml Copy Download

The paste blocks for the chosen style, in paste order.

4. Paste into Power Apps Studio

1. Go to **make.powerapps.com → Create → Blank canvas app**, choose **Tablet** format and give it a name.
2. **Demo data only:** in the Tree view, select **App**. In the property dropdown (top left) choose **Formulas**, then paste the `App.Formulas.txt` block into the formula bar.
3. Right-click **Screen1** in the Tree view and choose **Paste** with the first screen block. Repeat for each screen. **Studio can freeze for up to a minute** on large screens. Wait rather than pasting again.
4. Drag **HomeScreen** to the top of the Tree view (it becomes the start screen), delete **Screen1**, then **save** and press **Play**.
5. Open the **App checker**. It should report no formula errors. A few cosmetic warnings are normal.

> **Tip:** if you're adding screens to an app that already has screens with the same names, ask Claude to use an app *prefix* (for example `Inv`). Screen, control and variable names then won't clash.

5. Use your own data: SharePoint list from CSV

1. Download `sample-data.csv` (from the ready-to-use page, from `docs/`, or from Claude). Replace the rows with your own data if you like, but keep the column names.
2. Open **Microsoft Lists** or a SharePoint site and choose **New list → From CSV**, then upload the file.
3. Check the column types: **Qty, Reorder, Price → Number**. **Product, SKU, Category, Store, Region → Single line of text** (not Choice). Keep the names exactly as they are and leave the built-in Title column alone. The app fills it in.
4. Name the list `InventoryItems` and create it.
5. In your blank app, choose **Data → Add data → SharePoint**, pick your site and tick `InventoryItems`.
6. Paste the **SharePoint list** version of the screens. It has no App.Formulas block.
7. Optional: set **Settings → General → Data row limit** to 2000.

For your own app built with Claude, the CSV columns match your fields, and Claude tells you the list name to use.

6. The 30 styles

#	Style	Family	Good for
1	**Fluent Enterprise** `fluent`	Modern business	Internal line-of-business apps, approvals, HR / IT / finance tools, anything that sits next to Teams and SharePoint.
2	**Slate & Indigo** `slate`	Modern business	Dashboards, admin consoles, inventory / CRM / ticketing masters.
3	**Midnight Glow** `midnight`	Modern business	Ops / monitoring dashboards, IT and security consoles, data-heavy screens shown on big displays.
4	**Aurora Glass** `aurora`	Modern business	Employee portals, self-service apps, booking and request apps, home / landing screens.
5	**Soft Pastel** `pastel`	Modern business	Retail floor, education, wellbeing, onboarding and front-line apps used on tablets.
6	**Editorial Paper** `editorial`	Modern business	Reports and briefings, knowledge bases, policy / content apps, executive summaries.
7	**Neo-Brutalist** `brutal`	Modern business	Creative teams, campaigns, events, start-up tools, anything that should feel energetic and un-corporate.
8	**Keynote Noir** `keynote`	Modern business	Executive / CEO dashboards, sales leaderboards, kiosk and wallboard screens.
9	**Papercraft Models** `papercraft`	Atlas · Popular Explainer Looks	Retail and toy shops, maker / craft brands, kids' and education apps, playful internal tools.
10	**Flat-Vector Science** `flatvector`	Atlas · Popular Explainer Looks	Science, education and STEM apps, product catalogues, onboarding and anything that should feel curious.
11	**Watercolor Wash** `watercolor`	Atlas · Painterly	Wellbeing, hospitality, events, non-profit and community apps.
12	**Shadow Puppet Theatre** `shadowpuppet`	Atlas · Paper & Craft	Storytelling, culture and heritage, festivals, hospitality and evening / ambient displays.
13	**Whiteboard Explainer** `whiteboard`	Atlas · Hand-Drawn	Training and workshops, planning tools, team boards, classroom apps.
14	**Psychedelic Poster** `psychedelic`	Atlas · Cosmic & Psychedelic	Music, festivals, youth marketing, creative studios. Use when the app should shout.
15	**1940s Film Noir** `noir`	Atlas · Light & Imaging	Security, audit and investigations, legal / compliance, moody executive views.
16	**Manim-Style Math** `manim`	Atlas · Popular Explainer Looks	Analytics and finance models, engineering, data-science and forecasting tools.
17	**Illuminated Manuscript** `manuscript`	Atlas · Illustration	Heritage, libraries and archives, ceremonies, premium / luxury brands, certificates.
18	**Bioluminescent Deep Sea** `deepsea`	Atlas · Light & Imaging	Environmental and energy monitoring, IoT and sensor dashboards, night-shift operations.
19	**Halftone Pop Panel** `halftone`	Atlas · Print	Marketing, promotions and retail campaigns, gamified apps, youth audiences.

20	**Synthwave Neon** `synthwave`	Retro UI & Neon	Gaming, entertainment, music and nightlife, hackathons, fun internal leaderboards.
21	**Retro Desktop '95** `retroos`	Retro UI & Neon	Fun internal tools, IT teams, retro-themed campaigns, kiosks that must look clickable.
22	**Pixel Arcade** `pixel`	Retro Digital	Gamification, learning and rewards apps, kids' clubs, playful team trackers.
23	**Green Terminal** `terminal`	Retro Digital	Developer and DevOps tools, network / server status, hacker-style ops consoles.
24	**Blueprint** `blueprint`	Data & Information	Facilities, construction, engineering, field service and asset management.
25	**Bauhaus** `bauhaus`	Art & Design Movements	Design-led brands, architecture, museums, culture and any app wanting a confident, geometric look.
26	**Swiss Grid** `swiss`	Art & Design Movements	Corporate reporting, finance, consulting, public sector and documentation apps.
27	**Claymorphism** `clay`	Dimensional	Consumer-style employee apps, wellbeing, rewards, onboarding and kids' learning.
28	**Risograph Print** `risograph`	Print	Creative agencies, zines and media, community events, start-ups with personality.
29	**Chalkboard** `chalkboard`	Hand-Drawn	Schools and training, cafés and menus, coaching, team stand-ups.
30	**Art Deco** `artdeco`	Art & Design Movements	Luxury retail, hotels, banking and wealth, premium memberships and VIP dashboards.

The Atlas styles are based on Futurepedia's AI Style Atlas. The others follow its wider categories (Retro, Print, Art movements, Dimensional, Hand-drawn, Data). All of them are limited to fonts and graphics that Power Apps can render.

7. Troubleshooting

What you see	What to do
Studio stops responding after a paste	Large screens take 1–3 minutes to process. Wait, and don't paste twice.
"Name isn't valid": `SeedItems` or `colItems`	Paste the App.Formulas block first (demo version), then the screens.
"Name isn't valid": `InventoryItems`	Add the SharePoint list as a data source before pasting, and check the list name matches exactly.
Errors on Category / Region in the SharePoint version	Those columns must be *Single line of text*, not *Choice*.
A font error on the Whiteboard or Chalkboard styles	Replace `Font.'Patrick Hand'` with `Font.'Segoe UI'`.
A blue delegation underline	Fine for lists under 2,000 rows. Raise the data row limit, or ask Claude for delegation-friendly filters.
Duplicate name errors when adding to an existing app	Rebuild with an app prefix (ask Claude: "use prefix Inv").
The pasted screen looks different from the preview	Previews are HTML approximations. Fonts render slightly differently in Studio. Layout and colours should match.

What's in the repo

`SKILL.md`	The instructions Claude follows: ask, sample, pick, generate.
`docs/ready-to-use.html`	All 30 styles' YAML (demo and SharePoint versions) plus the CSV, in one offline page.
`examples/retail-inventory/<style>/`	Ready-made YAML and a `paste.html` for each style.
`assets/`, `gallery/`	The style-picker sheet, previews of every page, and a browsable gallery.
`scripts/`	The generator: `build.py` (spec → YAML) and `compare.py` (style samples).
`reference/`	Spec format, style catalogue, design rules and Power Apps YAML notes.
